TOUGHENED ADHESIVE EPOXY COMBINED FEATURES

EPOXIES for
Laminating
Infusion
Tooling
Assembly

Shear thinning resins and hardeners are thixotropic gels. The mixture fills gaps and will not sag on vertical surfaces. The material wets out the substrate, making priming or pre-wetting unnecessary on most surfaces, while ensuring a good bond.

Medium cure speed hardener provides approximately 95 minutes of working time at 72°F (22°C).

Room temperature cure properties suitable for many composite components and structures.

High performance pre-thickened, two-part epoxy adhesive delivers toughness and superior peel strength for heavily loaded applications and difficult to bond substrates including pre-preg, SMC, metals and most plastics. Also for secondary bonding of laminated composites, steel, aluminum, cast iron, concrete, stone, and most wood species. PRO-SET Adhesives bonds these material in any combination.

Coverage one cartridge set dispenses approximately 47' of 1/4" bead, or 17' of 1/2" bead and will cover approximately 7 sq ft when spread with a 1/8" x 1/8" notched spreader, or 12 sq ft with a 1/16" x 1/16" notched spreader.

Shelf life is 18 months for resin and 18 months for hardener when properly stored¹.

Test specimens were neat epoxy (without fiber reinforcement).
Typical values, not to be construed as specification.

Post Cure Schedule

many high-performance epoxy resins, repeated exposure to low temperatures during storage may cause the resin to crystallize. If this occurs, warm the resin to 125° F and stir to dissolve crystals. Hardeners may form carbamation when exposed to CO₂ and moisture in the atmosphere for extended periods of time. Prevent carbamation by protecting hardeners from exposure until immediately prior to processing.
