### 4. FIRST AID MEASURES

NOTES TO PHYSICIAN: Use of gastric lavage or emesis is contraindicated. Although product does not meet criteria for aspiration toxicity, vomitus may cause lung injury. Possible perforation of stomach or esophagus should be investigated. Consider endotracheal/esophageal control if lavage is done. Do not give chemical antidotes. Asphyxia from glottal edema may occur. Marked decrease in blood pressure may occur with moist rales, frothy sputum, and high pulse pressure. Treat symptomatically.

### 5. FIRE FIGHTING MEASURES

**SPECIAL FIRE FIGHTING PROCEDURES:** Use full-body protective gear and a self-contained breathing apparatus. Use of water may generate toxic aqueous solutions. Do not allow water run-off from fighting fire to enter drains or other water courses.

### 6. ACCIDENTAL RELEASE MEASURES

appropriate safety and personal protective equipment as indicated in Section 8.

material (e.g., sand) and collect in a suitable, closed container. Do not use sawdust, wood chips or other cellulosic materials to absorb the spill, as the possibility for spontaneous combustion exists. Warm, soapy water may be used to clean residual.

groundwater. See Section 12 for environmental impact information.

### HANDLING AND STORAGE 7.

container tightly closed. Store in a secure location with restricted access or store locked up.

adequate ventilation. If ventilation cannot be made adequate, refer to respiratory protection in Section 8. Do not breathe vapors or mists from heated material. Do not breathe concentrated vapors. Avoid skin and eye contact. Wash thoroughly after handling. When mixed with epoxy resin this product causes an exothermic reaction, which in large masses, can produce enough heat to damage or ignite surrounding materials and emit fumes and vapors that vary widely in composition and toxicity. Do not breathe vapors or fumes from uncontrolled exotherming masses.

### EXPOSURE CONTROLS/PERSONAL PROTECTION

ENGINEERING CONTROLS: ...... Use with adequate general ventilation and/or local ventilation to keep exposures below established limits.

EYE PROTECTION GUIDELINES: ..... Chemical splash-proof goggles or face shield.

butyl rubber or natural rubber) and full body-covering clothing. Use of an impervious material may be used for areas of the skin more likely to come in contact.

below established limits, use a NIOSH approved respirator with an organic vapor cartridge, organic vapor cartridge + P100, or a multi-contaminant cartridge, depending on specific workplace conditions. Consult with your respirator and cartridge supplier to ensure proper selection of respirator and cartridge based on ingredients listed in Section 3 and specific workplace conditions. Use and select a respirator according the guidelines established in OSHA 1910.134 or other applicable respiratory protection standard.

wash. Wash thoroughly after use. Contact lens should not be worn when working with this material. Generally speaking, working cleanly and following basic precautionary measures will greatly minimize the potential for harmful exposure to this product under normal use conditions.

### 10. STABILITY AND REACTIVITY

REACTIVITY / HAZARDOUS REACTIONS: ...... Product will not react by itself. A mass of more than one pound of product plus an epoxy resin will cause irreversible polymerization with significant heat buildup and pressure.

### INCOMPATIBILITIES: ...... Avoid organic and mineral acids, oxidizing materials, halogenated organic compounds (e.g., methylene chloride), nitrosating agents, sodium hypochlorite. External heating or self-heating could result in rapid temperature increase and pressure build up. If such a condition were to occur in a drum, the drum could expand and rupture violently.

CONDITIONS TO AVOID: ...... Avoid excessive heat.

decomposition. Decomposition products may include, but not limited to: oxides of nitrogen, volatile amines, ammonia, nitric acid, nitrosamines.
